ScaffCover: the groundbreaking high-end scaffolding cladding system

ScaffCover is a high-end, reusable and innovative new scaffolding cladding system that's been in development for the past couple of years, and since its launch has been a highly successful and much sought-after product in both the Australian and US markets.

Simple in its premise.

It uses a runner / rail system, connected to the scaffold structure which allows for prefabricated sheeting, netting and other composite external cladding materials to be vertically raised (and lowered) with little to no effort and low risk of an accident occurring, or falling from height.

It's also universal in its application, being able to be used with all other major system scaffold types, and traditional British "Tube and Fitting" alike.

However: Unlike traditional "scaffold sheeting", known as; Monarflex (which is made of a somewhat durable, weather-resistant low-density polyethylene), **ScaffCover** can come in a variety of colours and can be fully designed to accommodate a whole number advertising, safety, and social campaigns, and it's also reusable several times over, again, unlike Monarflex.

Monarflex Sheeting simply doesn't have the variety of colour, durability and usability as the materials **ScaffCover** is made from, whilst also retaining all the positives and weather-proofing aspects, making it actually a much more cost effective product to invest in.

This fantastic product requires minimal training to install, and can really elevate a contractors external image, due to the quality of the product, the versatility of its various cladding types available and its ability to be completely covered with customised design work, showcasing an organisations professionalism and commitment to safety, and with a classiness that few others can demonstrate.

There is a very worthwhile - yet substantial investment to be made in this product, and the materials that complete **ScaffCover**, whilst extremely durable, well made and precise, are not indestructible.

We would advise suitable storage and a bit of care, after purchase and after each use.

This great bit of kit does a multifunction role, and it's as much a statement of a companies quality, as it says about anything else.

Pound for pound, this is simply the best cladding system that Ultra Access has ever seen, and we're excited to see it become a mainstay at the numerous British tier one, and governmental construction, maintenance and infrastructure projects which it is perfectly suited for.
